

Responsible NLP Checklist

Paper title: *Mondrian: A Framework for Logical Abstract (Re)Structuring*

Authors: *Elizabeth Grace Orwig, Shinwoo Park, Hyundong Jin, Yo-Sub Han*

How to read the checklist symbols:

- the authors responded 'yes'
- the authors responded 'no'
- N/A the authors indicated that the question does not apply to their work
- the authors did not respond to the checkbox question

For background on the checklist and guidance provided to the authors, see the [Responsible NLP Checklist](#) page at ACL Rolling Review.

A. Questions mandatory for all submissions.

- A1. Did you describe the limitations of your work?

This paper has a Limitations section.

- N/A A2. Did you discuss any potential risks of your work?

We provide a framework to help solve a certain type of problem, but we do not solve one particular problem and therefore cannot identify fine-grained risks associated with the application of our framework, as that would be dependent on who uses it and how.

B. Did you use or create scientific artifacts? (e.g. code, datasets, models)

- N/A B1. Did you cite the creators of artifacts you used?

We created the dataset, we did not cite ourselves outright, but did refer to this in the Dataset section (6)

- N/A B2. Did you discuss the license or terms for use and/or distribution of any artifacts?

(left blank)

- N/A B3. Did you discuss if your use of existing artifact(s) was consistent with their intended use, provided that it was specified? For the artifacts you create, do you specify intended use and whether that is compatible with the original access conditions (in particular, derivatives of data accessed for research purposes should not be used outside of research contexts)?

(left blank)

- B4. Did you discuss the steps taken to check whether the data that was collected/used contains any information that names or uniquely identifies individual people or offensive content, and the steps taken to protect/anonymize it?

Our data was scraped from OpenReview academic articles (objective in nature) and each one was also manually examined.

- B5. Did you provide documentation of the artifacts, e.g., coverage of domains, languages, and linguistic phenomena, demographic groups represented, etc.?

In the Results, section 7

- B6. Did you report relevant statistics like the number of examples, details of train/test/dev splits, etc. for the data that you used/created?

In Experimental Setup, section 6

The Responsible NLP Checklist used at ACL Rolling Review is adopted from NAACL 2022, with the addition of ACL 2023 question on AI writing assistance and further refinements based on ARR practice.

C. Did you run computational experiments?

C1. Did you report the number of parameters in the models used, the total computational budget (e.g., GPU hours), and computing infrastructure used?
(left blank)

C2. Did you discuss the experimental setup, including hyperparameter search and best-found hyperparameter values?
Section 6.2

C3. Did you report descriptive statistics about your results (e.g., error bars around results, summary statistics from sets of experiments), and is it transparent whether you are reporting the max, mean, etc. or just a single run?
In the Results, section 7

C4. If you used existing packages (e.g., for preprocessing, for normalization, or for evaluation, such as NLTK, SpaCy, ROUGE, etc.), did you report the implementation, model, and parameter settings used?
Any packages that were used were for pre-processing the data and not limited to one package in order to do so.

D. Did you use human annotators (e.g., crowdworkers) or research with human subjects?

D1. Did you report the full text of instructions given to participants, including e.g., screenshots, disclaimers of any risks to participants or annotators, etc.?
The most information on this can be found in Appendix B

D2. Did you report information about how you recruited (e.g., crowdsourcing platform, students) and paid participants, and discuss if such payment is adequate given the participants' demographic (e.g., country of residence)?
(left blank)

D3. Did you discuss whether and how consent was obtained from people whose data you're using/curating (e.g., did your instructions explain how the data would be used)?
The data was taken only from anonymous sources, it would have been impossible to track.

D4. Was the data collection protocol approved (or determined exempt) by an ethics review board?
(left blank)

D5. Did you report the basic demographic and geographic characteristics of the annotator population that is the source of the data?
Appendix B

E. Did you use AI assistants (e.g., ChatGPT, Copilot) in your research, coding, or writing?

E1. If you used AI assistants, did you include information about their use?
Use of ChatGPT and Gemini were part of the framework, and information about this can be found in section 4, Methodology.
