## Introduction

Welcome to the 25th Conference on Computational Natural Language Learning (CoNLL). The conference is co-organized with EMNLP this year, but is taking place online, due to the impact of the COVID-19 pandemic.

Following the footsteps of CoNLL 2020, and in departure from previous editions of the conference, CoNLL 2021 focuses on theoretically, cognitively and scientifically motivated approaches to computational linguistics, rather than on work driven by particular engineering applications. This shift was indicated in the call for papers, the instructions given to the program committee, as well as in the publicity about the conference.

We received 226 submissions, of which 202 were sent out for review (the remaining submissions were desk-rejected or withdrawn by the authors). 52 submissions were ultimately accepted for publication (23.0% acceptance rate).<sup>1</sup> CoNLL 2021 features two invited talks, by Jennifer Culbertson (The University of Edinburgh, UK) and Gary Lupyan (University of Wisconsin–Madison, USA). We are grateful to all our reviewers (listed on the next page), and our dedicated area chairs: Ryan Cotterell, Adina Williams, Micha Elsner, Allyson Ettinger, Dipendra Misra, Samira Shaikh, Andrew Caines, Roi Reichart, Maja Popović, Rui Wang, Carlos Gómez-Rodríguez, Rob van der Groot, Dieuwke Hupkes, Xin Eric Wang, Michael Roth, Gabriel Stanovsky, Tanmoy Chakraborty, Kyle Gorman

We are also grateful to our publicity chair, Leshem Choshen, and our publication chair, Mareike Hartmann, for their substantial contribution to the conference, and to the SIGNLL information officers, Pieter Fizez and Jens Lemmens.

We would further like to acknowledge the support we received from Google for generously supporting the conference. Finally, we would also like to thank Julia Hockenmaier and Afra Alishahi and the members of the SIGNLL board for entrusting to us the task of organizing the conference, and Raquel Fernández and Tal Linzen, the organizers of CoNLL 2020, for their great advice and support.

Arianna Bisazza and Omri Abend  
CoNLL 2021 conference co-chairs

<sup>1</sup>When computing the acceptance rate based only on papers sent out for review, the rate becomes 25.7%.

# Organizing Committee

## Conference Chairs

Arianna Bisazza, University of Groningen, The Netherlands  
Omri Abend, Hebrew University of Jerusalem, Israel

## Invited Speakers

Jennifer Culbertson, University of Edinburgh, UK  
Gary Lupyán, University of Wisconsin–Madison, USA

## Area Chairs

Ryan Cotterell, ETH Zürich, Switzerland  
Adina Williams, Facebook AI Research, USA  
Micha Elsner, The Ohio State University, USA  
Allyson Ettinger, University of Chicago, USA  
Dipendra Misra, Microsoft Research, United States  
Samira Shaikh, University of North Carolina at Charlotte, USA  
Andrew Caines, University of Cambridge, UK  
Roi Reichart, Technion - Israel Institute of Technology, Israel  
Maja Popović, ADAPT, Dublin City University, Ireland  
Rui Wang, Shanghai Jiao Tong University, China  
Carlos Gómez-Rodríguez, Universidade da Coruña, Spain  
Rob van der Groot, IT University of Copenhagen, Denmark  
Dieuwke Hupkes, Facebook AI Research, France  
Xin Eric Wang, University of California, Santa Cruz, USA  
Michael Roth, University of Stuttgart, Germany  
Gabriel Stanovsky, The Hebrew University of Jerusalem, Israel  
Tanmoy Chakraborty, Indraprastha Institute of Information Technology Delhi (IIIT-D), India  
Kyle Gorman, The Graduate Center, City University of New York, USA

## Publication Chair

Mareike Hartmann, DFKI, Germany

## Publicity Chair

Leshem Choshen, Hebrew University of Jerusalem, Israel

**17:10–17:50 Oral session 5: Speech and phonology**

17:10–17:30 *Predicting non-native speech perception using the Perceptual Assimilation Model and state-of-the-art acoustic models*

Juliette Millet, Ioana Chitoran and Ewan Dunbar

17:30–17:50 *The Influence of Regional Pronunciation Variation on Children’s Spelling and the Potential Benefits of Accent Adapted Spellcheckers*

Emma O’Neill, Joe Kenny, Anthony Ventresque and Julie Carson-Berndsen

**17:50–18:20 Best Paper Award and Closing Words**

## Keynote Talk I

### **Linking Learning to Language Typology**

**Jennifer Culbertson, The University of Edinburgh, UK**

One of the most controversial hypotheses in linguistics is that individual-level biases in learning shape language typology at the population-level. While this hypothesis has been around a long time, it has often been supported by less than robust empirical evidence. In this talk, I present a number of studies aimed at providing new sources of evidence linking learning to key features of language. In the first part of the talk, I focus on a classic set of "language universals" which describe common word order patterns. One such pattern is word order harmony, the tendency for syntactic heads and dependents to align across phrases within a language. While harmony has long been claimed to have some special cognitive status, there is also compelling evidence that it may be driven by cognition-external processes of language change. I show that harmony is in fact favoured during learning, influencing how adults and children make inferences under noisy learning conditions, and how they extrapolate to new constructions. I then turn to a more complex pattern of word order which has been proposed to derive from constraints on syntactic representations. I report experimental and quantitative corpus-based evidence to suggest an alternative explanation of this pattern, but one nevertheless driven by learning. In the second part of the talk, I discuss the role of learning in shaping morphosyntactic patterns like grammatical gender. I argue that the different biases of children and adults during learning work together to constrain how such patterns emerge and change over time. Finally, I discuss the implications of this work for linguistic theories and models of language learning.

## Keynote Talk II

### **What are we Learning from Language?**

**Gary Lupyan, University of Wisconsin–Madison, USA**

Where does semantic knowledge come from? Previous work on semantic knowledge within cognitive science has focused on studying knowledge acquired from direct experience with the world and through inference. But recent advances in natural language processing combined with greater availability of large text corpora have revealed that languages encode far more semantic information than previously suspected. In some cases, knowledge that was thought to require direct perceptual experience or inferential reasoning can be derived entirely from language itself. I will present some recent investigations of this idea showing, for example, that embedded within the distributional structure of language is substantial information about visual appearance that people can rely on to learn about what things look like. I will also discuss how distributional semantics are informing our understanding of cross-linguistic differences in word meanings, and the relationship between language and thought. I will end by speculating that the robust availability of linguistic information may conceal radical diversity in human cognition.
