“Retrieval of the Best Counterargument  
without Prior Topic Knowledge”**

**Corpus and Source Code**

Corpus and source code of all experiments are available at: <http://www.arguana.com>

**Validation Set Results**

Found in Table 1 on the next page.

**Test Set Results per Theme**

Found in Tables 2 and 3 on the third page.

Table 1: **Validation set accuracy** of ranking the best counterargument highest for several baselines and approaches ( $w$ ,  $e$ ,  $w_{\downarrow}$ ,  $\dots$ ,  $r$ ) in the first six of the eight retrieval tasks (the last two were not evaluated on the validation set). The best accuracy values in each task are marked in bold. Aside from the ten baselines at the top and the random baseline at the bottom, we chose the three approaches ( $we$ ,  $we_{\downarrow}$ ,  $we_{\uparrow}$ ) for the test set experiments that were best in the six tasks. We left out the second one that was best in the first task, because — as can be seen — it performed notably worse in most other tasks.
