Keynote Lecture-2

Grammatical Error Correction: Past, Present, and Future

NG Hwee Tou
National University of Singapore

Grammatical error correction is the task of correcting errors in texts including spelling, grammar, collocation, and word choice errors. Software that can automatically correct errors in English texts has far-reaching impact, since it is estimated that more than one billion people worldwide are learning English as a second language and they will benefit greatly from such software. In this talk, I will give an overview of past and present research on grammatical error correction, and suggest future research directions.
