Description

BOLOGNA (the “Bologna Translation Service” (BTS)) is the result of an ICT PSP EU-funded project and specialises in the automatic translation of study programmes from Dutch, Finnish, French, German, Portuguese, Spanish, and Turkish, into English. The project was completed at the end of February, 2013 with an Excellent progress mark. CrossLang, Eleka, and Convertus are now offering the Bologna Translation Service in their respective territories.

At the core of the BTS framework are several machine translation (MT) engines through which web-based translation services are offered. The fully integrated BTS architecture includes a translation system that couples statistical MT with automatic and human post-editing and translation memory. The platform acts as a centralised tool for submitting and managing all translation requests within an educational institution.

The platform is currently being used by a number of higher education institutes and universities in various European countries.
