## Introduction

This is the second Workshop on Computational Approaches to Deception Detection. In the first edition, held in 2012 at the European Chapter of the Association for Computational Linguistics in Avignon (France), for the first time an event was specifically dedicated to the use of computational linguistics methods for the challenges of deception detection. Indeed four years ago we collected the experience of a growing literature, which in the last 15 years began to show both the potential of NLP techniques for the evaluation of truthfulness in communication and, in parallel, possible solutions to the many challenges of the field, such as the data collection, the estimation of the ground truth, the identification of effective linguistic features and so on.

Since the beginning we were aware that the complexity of the task and the plurality of the contexts where deception can take place required a multidisciplinary approach. The present Workshop represents a step forward in that direction. We received 7 high quality submissions, accepted as papers and, in one case, for a further short tutorial. The topics range from methodological issues, to the application of NLP in a number of specific environments, such as social media, or domains that involve particular cases of deceptive information. Personal characteristics of the subjects are also considered, and their relation with linguistic and behavioral style in deceptive messages are studied. We are also pleased that methods used in typically non language-centric disciplines, such as economics, are now proposed in the field of deception detection, which suggests the possibility of new synergies between different but significant fields of research. As a total picture, we see a lively cultural environment, where new ideas arise and are brought face to face in order to facilitate and to promote the development of new solutions for the evaluation of human communication.

We would like to thank NAACL for its endorsement of the workshop. We would also like to thank the NAACL workshop co-chairs, Radu Soricut and Adrià de Gispert, and the Local Arrangements Chair, Priscilla Rasmussen, for their support. Most of all, we would like to thank our enthusiastic program committee members for their timely and thoughtful review comments. Without them, this workshop on Computational Approaches to Deception Detection could not be implemented successfully.

**Organizers:**

Tommaso Fornaciari, Italian National Police, Italy  
Eileen Fitzpatrick, Montclair State University, Montclair NJ USA  
Joan Bachenko, Linguistech LLC, Oxford NJ USA

**Program Committee:**

Angela Almela, University Centre for the Defense, San Javier  
Iris Blandon-Gitlin, California State University, Fullerton  
Claire Cardie, Cornell University  
Fabio Celli, University of Trento  
Rajarathnam Chandramouli, Stevens Institute of Technology  
Carole Chaski, Institute for Linguistic Evidence  
Walter Daelemans, University of Antwerp  
Jeffrey Hancock, Stanford University  
Julia Hirschberg, Columbia University  
Shervin Malmasi, Harvard Medical School  
Jaume Masip, University of Salamanca  
Rada Mihalcea, University of Michigan  
Myle Ott, Facebook  
Isabel Picornell, Aston University  
Massimo Poesio, University of Essex  
Paolo Rosso, Universitat Politècnica de València  
Victoria Rubin, University of Western Ontario  
Eugene Santos, Thayer School of Engineering at Dartmouth  
Carlo Strapparava, Fondazione Bruno Kessler  
Lina Zhou, University of Maryland

**Invited Speaker:**

Rada Mihalcea, University of Michigan

## Table of Contents

<i>Account Deletion Prediction on RuNet: A Case Study of Suspicious Twitter Accounts Active During the Russian-Ukrainian Crisis</i> Svitlana Volkova and Eric Bell .....	1
<i>Fake News or Truth? Using Satirical Cues to Detect Potentially Misleading News</i> Victoria Rubin, Niall Conroy, Yimin Chen and Sarah Cornwell .....	7
<i>Using the verifiability of details as a test of deception: A conceptual framework for the automation of the verifiability approach</i> Bennett Kleinberg, Galit Nahari and Bruno Verschuere .....	18
<i>Estimating the Amenability of New Domains for Deception Detection</i> Eileen Fitzpatrick and Joan Bachenko .....	26
<i>The Use of Second Life for Deception Detection Research</i> Stephen Kunath and Kevin McCabe .....	32
<i>Identifying Individual Differences in Gender, Ethnicity, and Personality from Dialogue for Deception Detection</i> Sarah Ita Levitan, Yocheved Levitan, Guozhen An, Michelle Levine, Rivka Levitan, Andrew Rosenberg and Julia Hirschberg .....	40
<i>Individual Differences in Strategic Deception</i> Scott Appling and Erica Briscoe .....	45

# Conference Program

**Friday, June 17, 2016**

**9:00-10:00, keynote:**

*Multimodal Deception Detection using Real-life Trial Data*

Rada Mihalcea

**10:00-11:45, session 1**

*Account Deletion Prediction on RuNet: A Case Study of Suspicious Twitter Accounts Active During the Russian-Ukrainian Crisis*

Svitlana Volkova and Eric Bell

*Fake News or Truth? Using Satirical Cues to Detect Potentially Misleading News*

Victoria Rubin, Niall Conroy, Yimin Chen and Sarah Cornwell

*Using the verifiability of details as a test of deception: A conceptual framework for the automation of the verifiability approach*

Bennett Kleinberg, Galit Nahari and Bruno Verschuere

**11:45-12:00, Break**

**12:00-13:10, session 2**

*Estimating the Amenability of New Domains for Deception Detection*

Eileen Fitzpatrick and Joan Bachenko

*The Use of Second Life for Deception Detection Research*

Stephen Kunath and Kevin McCabe

**13:10-15:00, Break**

**15:00-16:10, Session 3**

*Identifying Individual Differences in Gender, Ethnicity, and Personality from Dialogue for Deception Detection*

Sarah Ita Levitan, Yocheved Levitan, Guozhen An, Michelle Levine, Rivka Levitan, Andrew Rosenberg and Julia Hirschberg

*Individual Differences in Strategic Deception*

Scott Appling and Erica Briscoe

**16:10-17:00, Demo**

*The Use of Second Life for Deception Detection Research*

Stephen Kunath and Kevin McCabe

**17:00-17:30, discussion**

## Keynote

### Multimodal Deception Detection using Real-life Trial Data

With thousands of trials and verdicts occurring daily in courtrooms around the world, the chance of using deceptive statements and testimonies as evidence is growing. In this talk, I will address the identification of deception in real-life trial data. I will present a novel dataset consisting of videos collected from public court trials, and describe a multimodal deception detection system that relies on verbal and non-verbal clues to discriminate between truthful and deceptive statements provided by defendants and witnesses. The system achieves a classification accuracy in the range of 60-75%, which exceeds by a large margin the non-expert human performance on this task. I will also describe our efforts to develop deception detection algorithms including additional modalities such as physiological sensing and thermal imaging.

This is joint work with Mihai Burzo, Mohamed Abouelenien, and Veronica Perez-Rosas.

**Rada Mihalcea** is a Professor in the Computer Science and Engineering department at the University of Michigan. Her research interests are in computational linguistics, with a focus on lexical semantics, multilingual natural language processing, and computational social sciences. She serves or has served on the editorial boards of the Journals of Computational Linguistics, Language Resources and Evaluations, Natural Language Engineering, Research in Language in Computation, IEEE Transactions on Affective Computing, and Transactions of the Association for Computational Linguistics. She was a program co-chair for the Conference of the Association for Computational Linguistics (2011) and the Conference on Empirical Methods in Natural Language Processing (2009), and a general chair for the Conference of the North American Chapter of the Association for Computational Linguistics (2015). She is the recipient of a National Science Foundation CAREER award (2008) and a Presidential Early Career Award for Scientists and Engineers (2009). In 2013, she was made an honorary citizen of her hometown of Cluj-Napoca, Romania.
