

GenderQuant: Quantifying Mention-Level Genderedness

Ananya

Nitya Parthasarathi

Sameer Singh

What is Gendered Language?

Are these stereotypes?

John plays soccer every day.

Ananya loves raising kids.

Alexis said, "This is a nice day".

Bob wants to accompany lovely *Gauri*.

Genderedness

If the gender of a mention can be correctly guessed from context, then the context is gendered.

For example:

■ looked untidier than ever, wearing a slatterny wrapper, hair thrust unbrushed into its net ..

FBI-agent [REDACTED] becomes an unwitting pawn of the white hand drug cartel.

In order to stifle their theatrical aspirations,
 arranges a screen test

Forms of Genderedness

Words

- Mailman, Cooking, Handsome, Ladylike, King-size, Maiden
- Women are homemakers, men are programmers.

Phrases

- He befriended a billionaire computer mogul Alex, and flight attendant Mary.

Sentences

- *Gauri* looked untidier than ever, wearing a slatterny wrapper, hair thrust unbrushed into its net ...

Objectives

- Mention-level genderedness
- Capture subtle context cues

Bob wants to accompany lovely *Gauri*.

Bob wants to accompany lovely *Gauri*.

Bob wants to accompany lovely *Gauri*.

- And do it without any human-annotated data!

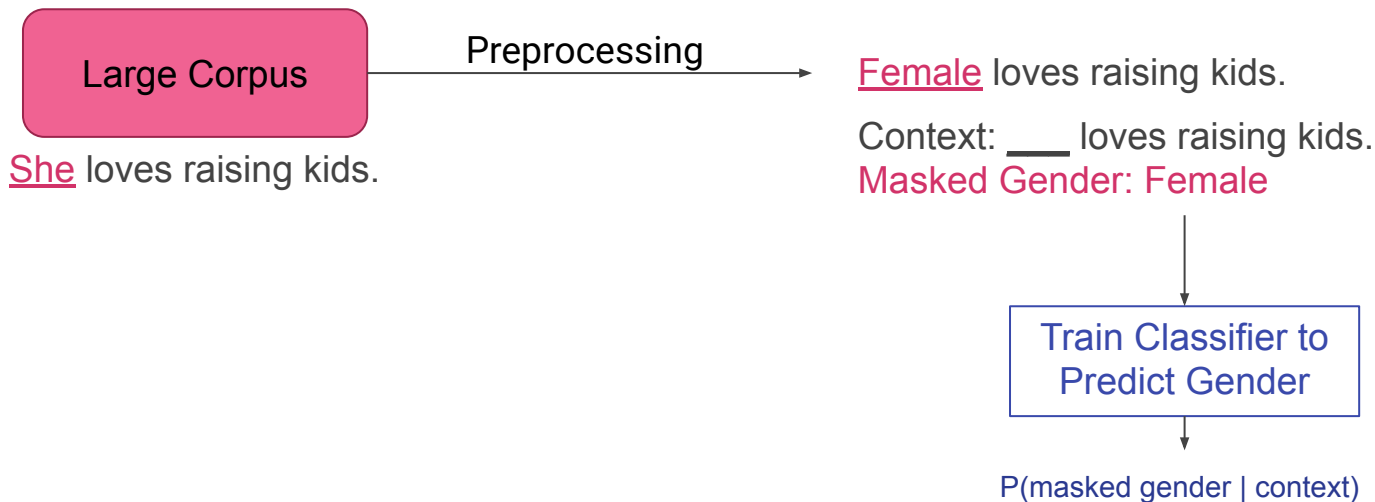

Framework to detect genderedness

How typical is context for a gender?

___ plays soccer every day.

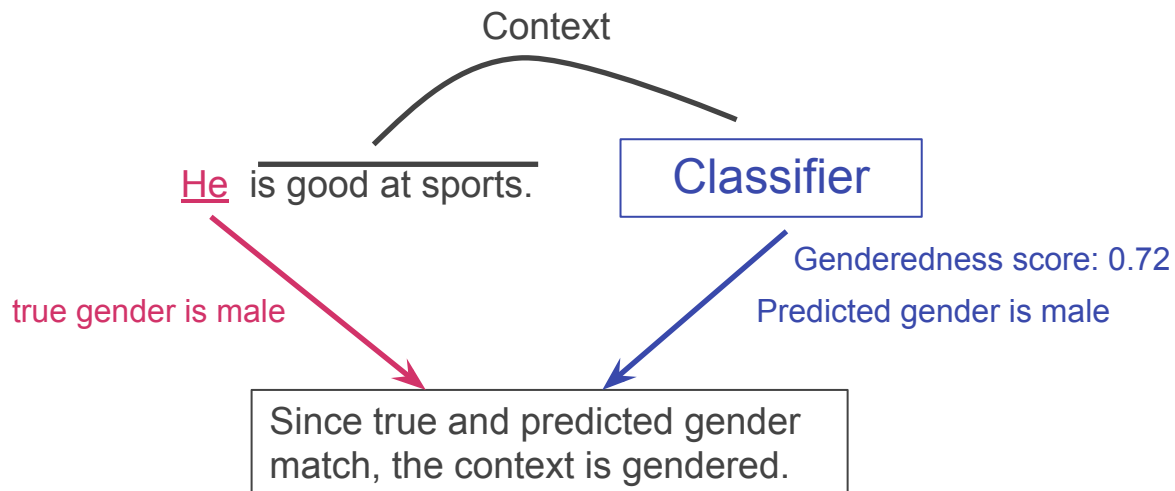

___ loves raising kids.

Learning about *Typical* Contexts via Masking

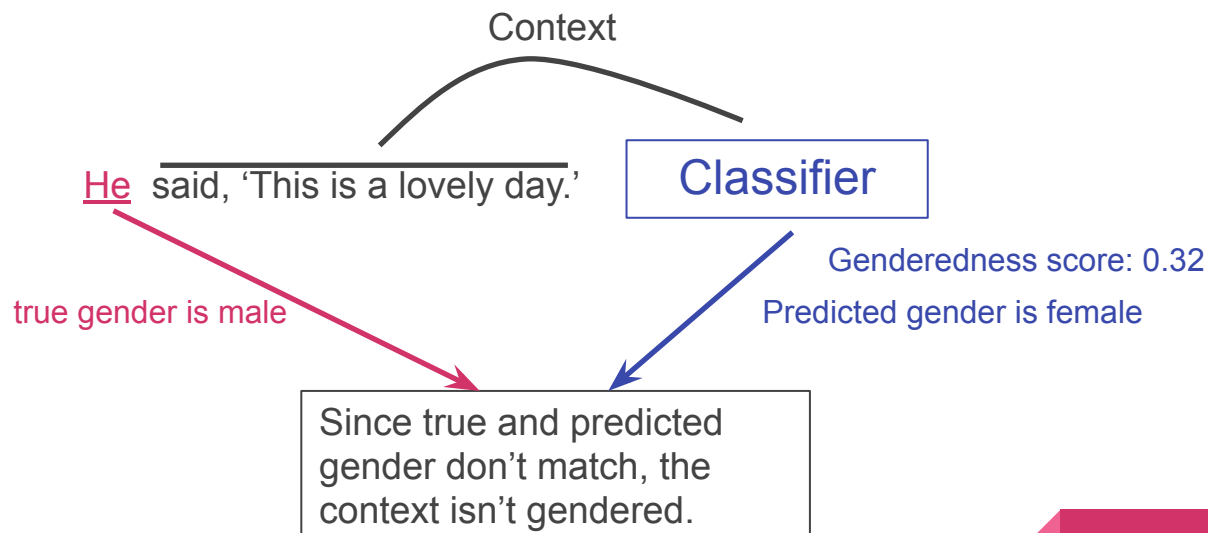

After training, the model should *know* which context is typical for which gender

Scoring Genderedness

Scoring Genderedness

Training Details

Dataset Details

Dataset	Male Mentions	Female Mentions
Movie Reviews (IMDB)	298, 580	104, 632
Movie Summaries (CMU Dataset)	405, 368	186, 626
News Articles (NYT-Gigaword)	19, 012, 473	3, 902, 510
Novels (Gutenberg)	18, 433, 400	6, 982, 348

Masking Gender

NER identifies this as mention

1. Miss Mary Briganza will go to Korea with her parents.

2. Miss *<female>* will go to Korea with her parents.

3. *<Title>* *<female>* will go to Korea with *<their>* parents.

4. *<Title>* _____ will go to Korea with *<their>* parents.

Mention -> Gender

Remove gender information

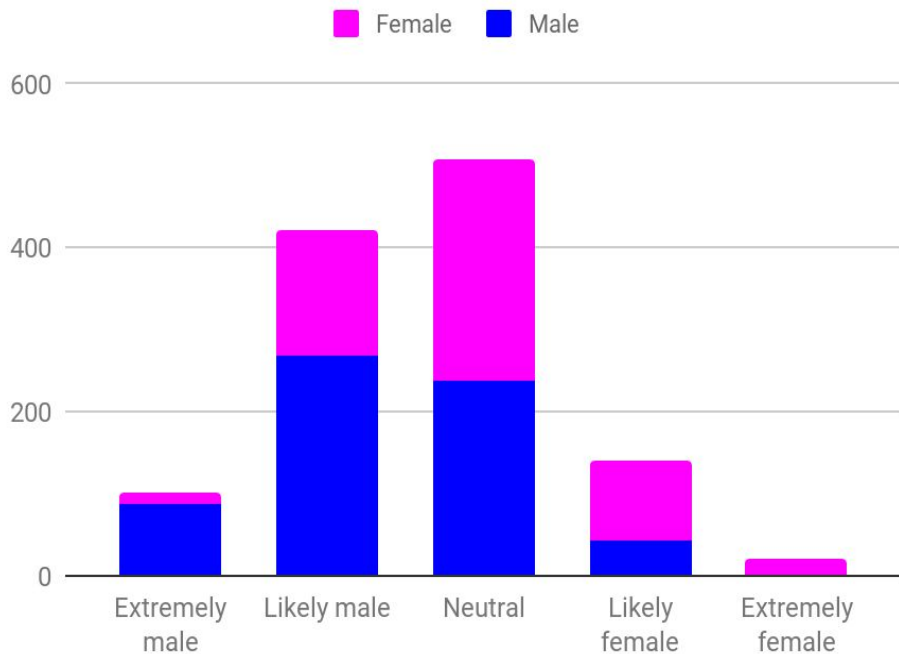

Mask gender before model

How well does the classifier unmask gender?

AUC-ROC	Reviews	Summaries	News	Novels
Bag-of-ngrams	0.64	0.62	0.70	0.71
Bag-of-word	0.63	0.62	0.70	0.71
2-way LSTM	0.67	0.66	0.68	0.67
2-way LSTM + ELMo	0.65	0.65	0.70	0.69
CNN	0.66	0.64	0.68	0.64

How well do humans do?

Human Predictions

42% of the examples are predicted **“Neutral”** by humans.

Pairwise inter-annotator agreement for binary gender guessing is around **0.6-0.65**

What do we discover?

(for novels)

Highly Gendered Nouns

godmother, melvina, skirt,
girlhood, lucile, womanly,
eyebright, womanhood,
shawl, dressmaker,
demurely

disciples, yussuf, rifle, jr,
pepe, cigar, colleague,
followers, erasmus, judas,
opponents

Highly Gendered Verbs

sobbed, sew, blushed,
wailed, pouted, scream,
moaned, giggled, weeping,
blushing, shrieked, faltered

preached, elected, growled,
states, yelled, roared,
nominated, voted, grinned,
slew, fire, attack

Highly Gendered Phrases

suffrage association
clasped *their* hands
glass eye
corresponding secretary
dressing room

lieut col
little chap
partnership with
old fellow
jimmy skunk

Highly Gendered Sentences

– *Person* looked untidier than ever; [red] wore a slatternly wrapper, and *their* hair was thrust unbrushed into its net.

– “What is it?” asked *Person*, as [red] folded and smoothed *their* best gown.

– If the collector will remember that, though [blue] is the present owner of *their* prints...

– *Person* is not an orator; *person* is not a writer; [blue] is not a thinker.

Challenges

Gender Identities

Binary Gender

Sex vs Gender

Facts vs Stereotypes

In 2016, there was a torrid debate over President-elect **Obama**'s \$1.3 trillion tax cut proposal.

As a farmer, **he** has to take care of the land.

Pitfalls in Extensibility to Other Domains

- Multilingual: how to mask gender from nouns/verbs? (e.g. Spanish)
- NLP pipeline
- Names to Gender

GenderQuant

Detect Genderedness in Language!

1. *Flexibility*: In application to different domains with minimal manual intervention
2. *Mention-level Analysis*: More granular analysis
3. *Quantitative Measure of Bias*: Allows large-scale and detailed analyses and comparison (across documents, corpora etc.)

GenderQuant

Sentence

Little chap Bob wants to marry lovely Sarah

Write a sentence that mentions a few people.

Run

Identified Mentions using [Spacy](#)

Bob

We will estimate the level of **male** genderedness in the language towards Bob. Anything below 50 indicates no genderedness, while close to 100 indicates use of stereotypical language.

Genderedness Score: **81**

Sarah

We will estimate the level of **female** genderedness in the language towards Sarah. Anything below 50 indicates no genderedness, while close to 100 indicates use of stereotypical language.

Genderedness Score: **90**

Thank you!
