Responsible NLP Checklist

Paper title: TactfulToM: Do LLMs have the Theory of Mind ability to understand White Lies? Authors: Yiwei Liu, Emma Jane Pretty, Jiahao Huang, Saku Sugawara

	_
How to read the checklist symbols:	
the authors responded 'yes'	
the authors responded 'no'	
the authors indicated that the question does not apply to their work	
the authors did not respond to the checkbox question	
For background on the checklist and guidance provided to the authors, see the Responsible NLP Checklist page at ACL Rolling Review.	

✓ A. Questions mandatory for all submissions.

- A1. Did you describe the limitations of your work? *This paper has a Limitations section.*
- A2. Did you discuss any potential risks of your work? Section Societal and Ethical Considerations
- **B.** Did you use or create scientific artifacts? (e.g. code, datasets, models)
 - ☑ B1. Did you cite the creators of artifacts you used? Section 4.1(Model Choice), References
 - B2. Did you discuss the license or terms for use and/or distribution of any artifacts? *The paper states that our created dataset is for "research purposes only"*.
 - B3. Did you discuss if your use of existing artifact(s) was consistent with their intended use, provided that it was specified? For the artifacts you create, do you specify intended use and whether that is compatible with the original access conditions (in particular, derivatives of data accessed for research purposes should not be used outside of research contexts)?
 - Our use of existing artifacts, such as evaluating large language models, is consistent with their intended use as research tools.
 - ☑ B4. Did you discuss the steps taken to check whether the data that was collected/used contains any information that names or uniquely identifies individual people or offensive content, and the steps taken to protect/anonymize it?
 - Section Societal and Ethical Considerations
 - ☑ B5. Did you provide documentation of the artifacts, e.g., coverage of domains, languages, and linguistic phenomena, demographic groups represented, etc.?

 Section 2, 3
 - B6. Did you report relevant statistics like the number of examples, details of train/test/dev splits, etc. for the data that you used/created? *Section 3.4*

☑ C. Did you run computational experiments?

- ∠C1. Did you report the number of parameters in the models used, the total computational budget (e.g., GPU hours), and computing infrastructure used?
 - The paper reports the parameter sizes of the models used in Section 4.1. It does not report the specific computing infrastructure or the total computational budget used for the experiments.
- C2. Did you discuss the experimental setup, including hyperparameter search and best-found hyperparameter values?
 - The prompt templates used for the experiments are provided in Appendix B.3.
- ☑ C3. Did you report descriptive statistics about your results (e.g., error bars around results, summary statistics from sets of experiments), and is it transparent whether you are reporting the max, mean, etc. or just a single run?
 - The paper reports main evaluation metrics such as accuracy in tables and figures. However, it does not report descriptive statistics regarding the variance of results (e.g., standard deviation or error bars across multiple runs), as each model was evaluated in a single run on the benchmark.
- C4. If you used existing packages (e.g., for preprocessing, for normalization, or for evaluation, such as NLTK, SpaCy, ROUGE, etc.), did you report the implementation, model, and parameter settings used?

 (left blank)

D. Did you use human annotators (e.g., crowdworkers) or research with human subjects?

- ☑ D1. Did you report the full text of instructions given to participants, including e.g., screenshots, disclaimers of any risks to participants or annotators, etc.?
 - The full text of the instructions given to our annotators, including screenshots and disclaimers, is provided in the supplementary materials in our official code and data repository, which is linked in the paper.
- ☑ D2. Did you report information about how you recruited (e.g., crowdsourcing platform, students) and paid participants, and discuss if such payment is adequate given the participants' demographic (e.g., country of residence)?
 - Section 3.3, 4.3, Societal and Ethical Considerations, Appendix B.1
- ☑ D3. Did you discuss whether and how consent was obtained from people whose data you're using/curating (e.g., did your instructions explain how the data would be used)?

 Societal and Ethical Considerations
- D4. Was the data collection protocol approved (or determined exempt) by an ethics review board? The paper does not report approval from an ethics review board, because we didn't collect personal information.
- ✓ D5. Did you report the basic demographic and geographic characteristics of the annotator population that is the source of the data?

 Appendix B.1
- **E.** Did you use AI assistants (e.g., ChatGPT, Copilot) in your research, coding, or writing?
 - ☑ E1. If you used AI assistants, did you include information about their use? *Appendix C: AI Usage and Resources*
