Responsible NLP Checklist

Paper title: Rewarding the Unlikely: Lifting GRPO Beyond Distribution Sharpening Authors: Andre Wang He, Daniel Fried, Sean Welleck

How to read the checklist symbols:	
the authors responded 'yes'	
X the authors responded 'no'	
the authors indicated that the question does not apply to their work	
the authors did not respond to the checkbox question	
For background on the checklist and guidance provided to the authors, s page at ACL Rolling Review.	ee the Responsible NLP Checklist

✓ A. Questions mandatory for all submissions.

- A1. Did you describe the limitations of your work? *This paper has a Limitations section.*
- A2. Did you discuss any potential risks of your work?

 We feel our work presents the same risks as NLP and ML research in general; we did not feel the need to highlight any specific risks arising from our work.

B. Did you use or create scientific artifacts? (e.g. code, datasets, models)

- ☑ B1. Did you cite the creators of artifacts you used?

 We cite creators of artifacts when they are mentioned in the paper.
- B2. Did you discuss the license or terms for use and/or distribution of any artifacts?

 All artifacts we use are under permissive licenses. We release some of our artifacts but do not intend to restrict their use.
- B3. Did you discuss if your use of existing artifact(s) was consistent with their intended use, provided that it was specified? For the artifacts you create, do you specify intended use and whether that is compatible with the original access conditions (in particular, derivatives of data accessed for research purposes should not be used outside of research contexts)?

We only use artifacts with permissive licenses, in ways that are common in the research community. We did not feel the need to specifically discuss compliance.

B4. Did you discuss the steps taken to check whether the data that was collected/used contains any information that names or uniquely identifies individual people or offensive content, and the steps taken to protect/anonymize it?

We only work with theorem proving data, which is unlikely to contain any personal info.

- ☑ B5. Did you provide documentation of the artifacts, e.g., coverage of domains, languages, and linguistic phenomena, demographic groups represented, etc.?

 We detail what artifacts we use and how we use them. Documentation of these artifacts are provided where they are released.
- B6. Did you report relevant statistics like the number of examples, details of train/test/dev splits, etc. for the data that you used/created? *Yes, section 3.1*

☑ C. Did you run computational experiments?

- ✓ C1. Did you report the number of parameters in the models used, the total computational budget (e.g., GPU hours), and computing infrastructure used?

 Appendix B
- ✓ C2. Did you discuss the experimental setup, including hyperparameter search and best-found hyperparameter values?

 Section 3.2
- C3. Did you report descriptive statistics about your results (e.g., error bars around results, summary statistics from sets of experiments), and is it transparent whether you are reporting the max, mean, etc. or just a single run?

We detail how we compute metrics in Appendix C

✓ C4. If you used existing packages (e.g., for preprocessing, for normalization, or for evaluation, such as NLTK, SpaCy, ROUGE, etc.), did you report the implementation, model, and parameter settings used?

We mention the specific training framework and environment in Section 3.2. Other details (e.g. dependencies) can be found in our code release README.

D. Did you use human annotators (e.g., crowdworkers) or research with human subjects?

- D1. Did you report the full text of instructions given to participants, including e.g., screenshots, disclaimers of any risks to participants or annotators, etc.? (*left blank*)
- D2. Did you report information about how you recruited (e.g., crowdsourcing platform, students) and paid participants, and discuss if such payment is adequate given the participants' demographic (e.g., country of residence)? (*left blank*)
- D3. Did you discuss whether and how consent was obtained from people whose data you're using/curating (e.g., did your instructions explain how the data would be used)? (*left blank*)
- D4. Was the data collection protocol approved (or determined exempt) by an ethics review board? (*left blank*)
- D5. Did you report the basic demographic and geographic characteristics of the annotator population that is the source of the data?

 (left blank)

☑ E. Did you use AI assistants (e.g., ChatGPT, Copilot) in your research, coding, or writing?

E1. If you used AI assistants, did you include information about their use?

We only used AI assistants for basic use cases such as generating boilerplate code and revising writing at a low level. We did not use it in significant or unexpected ways that we felt were worth mentioning.
