

Responsible NLP Checklist

Paper title: *More Aligned, Less Diverse? Analyzing the Grammar and Lexicon of Two Generations of LLMs*

Authors: *Adrin Gude, Roi Santos-Rios, Francis Bond, Dan Flickinger, Carlos Gmez-Rodrguez, Olga Zamaraeva*

How to read the checklist symbols:

- the authors responded 'yes'
- the authors responded 'no'
- ^{N/A} the authors indicated that the question does not apply to their work
- the authors did not respond to the checkbox question

For background on the checklist and guidance provided to the authors, see the [Responsible NLP Checklist](#) page at ACL Rolling Review.

A. Questions mandatory for all submissions.

- A1. Did you describe the limitations of your work?

This paper has a Limitations section.

- A2. Did you discuss any potential risks of your work?

No. This work analyzes linguistic properties of LLM-generated and human-authored text and does not introduce new models, datasets, or applications that pose direct risks.

B. Did you use or create scientific artifacts? (e.g. code, datasets, models)

- B4. Did you discuss the steps taken to check whether the data that was collected/used contains any information that names or uniquely identifies individual people or offensive content, and the steps taken to protect/anonymize it?

No. The data consists of publicly available news articles and synthetic text generated by language models. No personally identifying or sensitive private information is introduced or processed.

- B6. Did you report relevant statistics like the number of examples, details of train/test/dev splits, etc. for the data that you used/created?

Yes. Dataset statistics, including number of sentences, model sizes, and data sources, are reported in Section 4 (Tables 1 and 2).

C. Did you run computational experiments?

- C2. Did you discuss the experimental setup, including hyperparameter search and best-found hyperparameter values?

Yes. The experimental setup, including prompting strategy and hyperparameters is described in Section 4.

- C3. Did you report descriptive statistics about your results (e.g., error bars around results, summary statistics from sets of experiments), and is it transparent whether you are reporting the max, mean, etc. or just a single run?

Yes. Results are reported using diversity metrics (Shannon and Simpson indices), along with comparative analyses across datasets and model generations (Section 5).

The Responsible NLP Checklist used at ACL Rolling Review is adopted from NAACL 2022, with the addition of ACL 2023 question on AI writing assistance and further refinements based on ARR practice. ACL 2026 used a subset of ARR checklist form.

D. Did you use human annotators (e.g., crowdworkers) or research with human subjects?

D1. Did you report the full text of instructions given to participants, including e.g., screenshots, disclaimers of any risks to participants or annotators, etc.?

(left blank)

D2. Did you report information about how you recruited (e.g., crowdsourcing platform, students) and paid participants, and discuss if such payment is adequate given the participants' demographic (e.g., country of residence)?

(left blank)

D3. Did you discuss whether and how consent was obtained from people whose data you're using/curating (e.g., did your instructions explain how the data would be used)?

(left blank)

D4. Was the data collection protocol approved (or determined exempt) by an ethics review board?

(left blank)

E. Did you use AI assistants (e.g., ChatGPT, Copilot) in your research, coding, or writing?

E1. If you used AI assistants, did you include information about their use?

Yes. The use of AI assistants (ChatGPT, Gemini, Copilot, Claude) for minor editing and coding support is described in the Acknowledgments section.
