

## Rhyme and Reason

### An Introduction to Minimalist Syntax

*Juan Uriagereka*

foreword by

*Massimo Piattelli-Palmarini*

"It is hard to imagine a book that manages to explain both the nuts and bolts of the theory of language and its deeper significance more lucidly or engagingly." — C.P. Otero, UCLA

694 pp., 216 illus. \$70

## Language Form and Language Function

*Frederick J. Newmeyer*

"An engaging and provocative inquiry...Newmeyer is well-informed, thoughtful and impeccably non-ideological. No doubt every linguist will find something in it to disagree with, but I think that everyone with a serious interest in the history and the future of syntactic theory will profit considerably from reading it."

—Peter W. Culicover, The Ohio State University

Language, Speech, and Communication series  
400 pp., 6 illus. \$40

## Language Creation and Language Change

### Creolization, Diachrony, and Development

*edited by Michel DeGraff*

Explores relationships among the three processes by which languages, in particular grammars, change and hence are created anew: when one language is absorbed into another, over long periods of time and usage, and when children learn language.

Learning, Development, and Conceptual Change series • 586 pp., 4 illus. \$65

## On the Pragmatics of Communication

*Jürgen Habermas*

*edited by Maeve Cooke*

An anthology of Habermas' major statements of his program in formal pragmatics, which underpins his theory of communicative action.

Studies in Contemporary German Social Thought  
416 pp. \$35

## Acoustic Phonetics

*Kenneth N. Stevens*

"Whenever anybody wants to know why the acoustic structure of a particular sound is as it is, this is the book to which they will turn. There is absolutely no other book with anything like this depth of coverage."

— Peter Ladefoged, UCLA

Current Studies in Linguistics 30  
672 pp., 700 illus. \$60

now in paperback

## Methods for Assessing Children's Syntax

*edited by Dana McDaniel, Cecile McKee, and Helen Smith Cairns*

This book is designed in part as a handbook to assist students and researchers in the choice and use of methods for investigating children's grammar.

Language, Speech, and Communication series  
A Bradford Book  
408 pp., 7 illus. \$20 paper

## The Dependencies of Objects

*Esther Torrego*

Investigates the nature, properties, and consequences of the grammatical constraints that yield overt marking of objects in a variety of languages.

Linguistic Inquiry Monograph 34  
216 pp. \$20 paper

## Three Investigations of Extraction

*Paul M. Postal*

Focuses on three problems in the theory of syntax, unified by their connection to "extraction," the displacement of an element via grammatical processes from the position where it would logically seem to belong.

Current Studies in Linguistics 29  
232 pp. \$32.50

To order call 800-356-0343 (US & Canada) or (617) 625-8569. Prices higher outside U.S. and subject to change without notice.

# THE BEST IN LINGUISTICS

## **An Experience-Based Theory of Language**

Data Oriented Parsing

**Rens Bod**

During the past few years, a new approach to language processing has started to emerge, which has become known under the name of Data Oriented Parsing (DOP). This approach embodies the assumption that human language perception and production works with representations of concrete past language experiences, rather than with abstract grammar rules.

1-57586-150-X Hardback \$59.95

1-57586-151-8 Paperback \$19.95

## **Presupposition and Anaphora**

**Emiel Jacques Krahmer**

In this book, two related phenomena are studied: presupposition and anaphora. Dynamic semantics is by now widely accepted as a first-rate foundation for such an exercise and it forms the backbone of most of the work in this book. A recurring additional theme of the present book is the usefulness of techniques from partial logic in the treatment of both phenomena.

1-57586-147-X Hardback \$59.95

1-57586-146-1 Paperback \$22.95

## **Abstract Specification of Grammar**

Algebraic Specification Language:  
A Case Study

**Michael Newton**

This book explores the use of an algebraic (software) specification language (ASL) in the description and modeling of natural language grammar. An abstract description of constituency is given, independent of concrete styles of grammar, which demonstrates the need for an intensional domain.

1-57586-122-4 Paperback \$22.95

## **Linguistic Databases**

**John Nerbonne, Editor**

This book explores the increasing use of databases in linguistics. The enormous potential in linguistic data—billions of utterances and messages daily—has been difficult to exploit. Included in this volume are reports on database activities in phonetics, phonology, lexicography and syntax, comparative grammar, second-language acquisition, linguistic fieldwork and language pathology.

1-57586-093-7 Hardback \$64.95

1-57586-092-9 Paperback \$24.95

## **A Descriptive Approach to Language-Theoretic Complexity**

**James Rogers**

This book presents a natural and quite general means of expressing constraints on the structure of trees and shows that the languages that can be specified by systems of such constraints are exactly those computable by a particular standard class of abstract machines.

1-57586-137-2 Hardback \$59.95

1-57586-136-4 Paperback \$22.95

## **Learnable Classes of Categorical Grammars**

**Makoto Kanazawa**

*"The book does an excellent job of summarizing previous work and preparing the reader for the main results. The text is clean, the presentation clear and rigorous, and the comprehensive list of references will be helpful to anyone wishing to pursue some of the interesting open questions raised in this monograph."*

—R. Roos, *Computing Reviews*

This book investigates learnability of various classes of classical categorical grammars within the Gold paradigm of identification in the limit from positive data.

1-57586-097-X Hardback \$59.95

1-57586-096-1 Paperback \$22.95

# FROM CAMBRIDGE

## **Dynamic Conceptual Semantics**

A Data-oriented Theory of Concept Formation and Understanding

**Renate Bartsch**

Presented in this book is a theory of concept formation and understanding that does not make use of a notion of an innate mental language as a means of concept representation. Instead, experiential concepts are treated semantically as stabilizing structuring of growing sets of data, which are sets of experienced satisfaction situations for expressions, and theoretical concepts are based on coherent sets of general sentences held true.

1-57586-125-9 Hardback \$64.95  
1-57586-124-0 Paperback \$24.95

## **Computing Natural Language**

Context, Structure, and Processes

**Atocha Aliseda-Llera, Rob Van Glabbeek, and Dag Westerstahl, Editors**

This book pursues the recent upsurge of research in the interface of logic, language and computation, with applications to artificial intelligence and machine learning. It contains a variety of contributions to the logical and computational analysis of natural language. A wide range of logical and computational tools are employed and applied to such varied areas as context-dependency, linguistic discourse, and formal grammar.

1-57586-101-1 Hardback \$59.95  
1-57586-100-3 Paperback \$22.95

## **What Comes First in Dynamic Semantics**

A Critical Review of Linguistic Theories of Presupposition and a Dynamic Alternative

**David Beaver**

Inspired by Frege, who's work in Linguistic Presupposition initiated the modern study, Beaver shares with the reader the most comprehensive overview and critical discussion of this burgeoning field published to date. The central plank of the theory of meaning is a formal account of the change in information effected by use of language on hearers or readers. At the same time it provides a new impulse and motivation to Dynamic Semantics itself.

1-57586-121-6 Hardback \$64.95  
1-57586-120-8 Paperback \$24.95

## **Discourse and Cognition**

Bridging the Gap

**Jean-Pierre Koenig, Editor**

This volume brings together research from both "cognitive" and "functional" approaches to linguistics. The collection includes work from cognitive science disciplines whose concerns overlap with linguistics, such as artificial intelligence, neurolinguistics and psychology. Despite their diversity, the papers in this volume are all inspired by the same fundamental question: To what extent is the structure of languages affected by human cognitive structures and language use?

1-57586-115-1 Hardback \$69.95  
1-57586-114-3 Paperback \$27.95

*The Salk Institute and University of California at San Diego*

Published 8 times per year by The MIT Press

in January/February/April/May/July/August/October/November

Now in its tenth year, *Neural Computation* has established itself as the leading journal for a growing community of scientists interested in exploring the computational principles that make brains tick. Carefully reviewed by a distinguished editorial board, *Neural Computation* publishes short communications, long articles and timely reviews on the interplay between experimental data, computational models, and theoretical analysis at all levels of organization in the brain, from the molecular to the systems levels.

"... Artificial Life is a very cool ...

scholarly journal."

-Wired

"... a remarkable profusion of

topics ... For aficionados, the

journal is a must. Theoretical

biologists, empirical

mathematicians ... will also do

well to follow Artificial Life ..."

-Nature

"... The [editors] account for most

of the influential researchers in this

field. All involved deserve credit for

attempting the difficult task of

producing a truly interdisciplinary

journal ..."

-The Times Higher Education

Supplement

"... preeminent venue for publishing

significant research findings in this

fascinating field ..."

-AI Expert

# Artificial Life

Artificial Life is the first unifying forum for the dissemination of scientific research in the new field of artificial life. Relevant topics span the hierarchy of biological organization, including studies of the origin of life, self-assembly, growth and development, evolutionary and ecological dynamics, animal and robot behavior, social organization, and cultural evolution.

**Association for Computational Linguistics**  
**1998 MEMBERSHIP, CHANGE OF ADDRESS AND EMAIL, AND ORDER FORM**  
**MEMBERSHIP**

Membership in the Association for Computational Linguistics is for the calendar year, regardless of when dues are paid. Membership includes a full year of the ACL journal, Computational Linguistics, reduced registration at most ACL-sponsored conferences, and discounts on ACL-sponsored publications. Payments for membership dues, fund donations, back issues, and proceedings may be made in Europe or the USA. Follow the instructions under the **PAYMENT** heading carefully. Provide all personal information, even if you have previously done so, to be sure the ACL membership database is up-to-date. Write legibly, please! Do not fill in your name/address unless the mailing label below is incorrect.

**FULL NAME** \_\_\_\_\_

(first)

(last/family)

**ADDRESS** \_\_\_\_\_

**INSTITUTION** \_\_\_\_\_ **TELEPHONE** \_\_\_\_\_

(if not in address above)

**E-MAIL ADDRESS** \_\_\_\_\_ **FAX** \_\_\_\_\_

Please **IMMEDIATELY** notify the ACL Office of address and email changes. Journal copies returned due to bad addresses will not be remailed until a \$5.00 postage/handling fee is remitted. **EMAIL (if available) IS USED TO DISTRIBUTE meeting, membership, and other announcements.**

**MEMBERSHIP DUES FOR 1998**

**IMPORTANT NOTE:** Renewals must be received no later than 1 April 1998 to avoid late payment fee assessment. Membership categories include Regular Members and the following: Couples with the same mailing address may be Joint Members; they will receive only one set of publications, but each will be eligible for all other member benefits. Students taking a full-time program of courses and not earning a regular income may become Student Members **WITH COPY OF CURRENT STUDENT ID**. Students who are not Student Members because of their income can still participate in student activities as Student-Employed. Also available are Retired and Unemployed memberships. **PLEASE CIRCLE / HIGHLIGHT TYPE OF MEMBERSHIP BELOW THAT YOU DESIRE.** Late payment fee does not apply to new memberships.

(list in PAYMENT SECTION)

# Guidelines for Submissions

Manuscripts for **Computational Linguistics** should be submitted on letter-size paper (8.5 by 11 inches, or A4), double-spaced and single-sided throughout, including footnotes and references. The paper should begin with an informative abstract of approximately 150–250 words. Manuscripts must be written in English. Contact the editor regarding the possibility of electronic submission.

Submissions may be made in any of the following categories:

**Papers:** This category includes contributions that report significant new research results in computational linguistics or that provide critical reviews of the literature on a particular topic. The length of a paper depends on its content, but it is suggested that manuscripts be limited to forty double-spaced pages. That is the equivalent of thirty journal pages. Each paper is fully refereed by three or four experts in the field. Manuscripts may also be submitted electronically; consult <http://www.cs.columbia.edu/~radev/acl/submit.txt> for instructions and pointers to the L<sup>A</sup>T<sub>E</sub>X style files. The submission of an article to CL for refereeing means that the author certifies the manuscript is not copyrighted; nor has it been published or submitted for publication to another refereed journal. If any version of the paper has appeared, or will appear, in a non-refereed publication, the details of such publication must be made known to the Editor at the time of submission. The final version of a paper tentatively accepted for publication must be accompanied by a Copyright Transfer Agreement signed by all of the authors or, in the case of a "work for hire," by the employer. This written transfer is necessary under the 1978 U.S. Copyright law.

**Letters to the Editor:** This category includes statements of opinion on issues relevant to the readership. The Editor and the editorial board will evaluate the appropriateness of these contributions for inclusion.

Five copies of papers or three copies of letters should be sent to:

Julia Hirschberg, CL Editor  
AT&T Labs-Research  
180 Park Avenue, A237  
Florham Park, NJ 07932-0971  
(+1 973) 360-8330; [acl@research.att.com](mailto:acl@research.att.com)

**Squibs and Discussions:** This category includes short articles reporting technical results, discussions of results, algorithms, or new computational linguistic data or tools of interest to the journal readership. Submission format is the same as for regular papers, but the length should in no case exceed eight journal pages. Electronic submissions (L<sup>A</sup>T<sub>E</sub>X source, postscript or plain text) are welcome and should be submitted to:

Pierre Isabelle, CL Squibs and Discussions Editor  
RALI, DIRO  
Université de Montréal  
C. P. 6128, Succ. Centre-ville  
Montreal, Quebec, CANADA H3C 3J7  
(+1 514) 343-6161; [isabelle@iro.umontreal.ca](mailto:isabelle@iro.umontreal.ca)

**Book Section:** Anyone interested in reviewing a book, or in suggesting a book for review, should contact the Book Review Editor; publishers may also submit copies of books for review directly to:

Graeme Hirst, CL Book Review Editor  
University of Toronto  
Department of Computer Science  
Toronto, CANADA M5S 3G4  
(+1 416) 978-8747; [gh@cs.toronto.edu](mailto:gh@cs.toronto.edu)

Founded in 1962, the Association for Computational Linguistics (ACL) is the primary scientific and professional society for natural language processing research and applications. A European chapter was established in 1982. Besides publishing *Computational Linguistics*, the ACL holds international meetings (annually in North America, biennially in Europe) where the state-of-the-art in natural language processing research and development is presented. Recently, special interest groups on the Mathematics of Language, the Lexicon, Parsing, Generation, Computational Phonology, Multimedia Language Processing, and Very Large Corpora have been formed; others are likely to be added.
