Preface: General Chair

I am honored to be serving as General Conference Chair for the annual conference in our field. This year's conference, ACL-08: HLT, is jointly sponsored by the Association for Computational Linguistics and the North American Chapter of the Association for Computational Linguistics and it thus brings together the traditions of both organizations. As is evident from the title, one of those traditions is the focus on research from all areas of Human Language Technology, including information retrieval, natural language processing and speech. The conference features invited speakers in speech and information retrieval and there are sessions devoted to all three of these areas. I hope this conference will again encourage interaction among researchers from the different areas.

Since I was last involved in organizing the ACL Conferences back in the 90's, the conferences have grown dramatically. I was surprised to learn the number of people required to make the conference happen. Some 30 odd people are serving in Chair or Co-Chair capacity of various aspects of the conference. While I was pleased to have the opportunity of shaping aspects of the conference, I have to say that the real bulk of the work is done by the many Chairs involved. So I want to express my gratitude to all of them for their commitment and dedication to making sure that all ran smoothly. I am impressed by the energy and time that everyone gave to this volunteer activity.

I would like to thank the Program Chairs, Johanna Moore, Simone Teufel, James Allan and Sadaoki Furui, who have put in many hours to provide us with the main program for the conference and the Local Arrangements Chair, Chris Brew, who has provided us with the venue for the conference and oversaw the many time-demanding details. DJ Hovermale also put in many hours as webmaster, collecting information from everyone. I would like to thank the Chairs of the Student Research Workshop, Ebru Arisoy, Wolfgang Maier and Keisuke Inoue, who worked quite independently, along with the Faculty Advisor, Jan Wiebe. The Workshop Chair, Ming Zhou, managed the workshop program with ease, a program that has grown over the years so that it seems like a conference in and of itself. The Tutorial Chairs, Ani Nenkova, Marilyn Walker and Eugene Agichtein, have put together a fine tutorial program and the Demo Chair, Jimmy Lin, has organized a nice series of demos. The Sponsorship Chairs are responsible for bringing in funding to cover various programs and I would like to thank Inderjeet Mani, Josef van Genabith and Michael White for their efforts in this regard. The Publicity Chairs, Hal Daumé III, Eric Fosler-Lussier and Diane Kelly, reached out to communities outside the central natural language areas to encourage people to submit papers and attend the conference. Finally, I would like to give a big thanks to the Publication Chairs, Joakim Nivre and Noah A. Smith, who were very organized and handily managed the job of pulling all materials together for the main conference and workshop proceedings, no small feat.

In addition to the Chairs, individuals within the ACL organization itself deserve recognition. First and foremost, my thanks goes to Dragomir Radev, who provided guidance about what to do next at every step and who had the answer to every question I had within seconds. Owen Rambow also provided much needed advice from the perspective of the North American Chapter. Priscilla Rasmussen is critical to the running of the conference, with her organizational history of how things work. Finally, I would like to thank the Coordinating Committee for being available for discussion and for providing advice.

ACL-08: HLT General Chair

Preface: Program Chairs

The program for ACL-08: HLT features a wide variety of avenues for authors to present their latest work in computational linguistics, information retrieval, and speech technology. The program includes: full papers, short papers, posters, demonstrations, and a student research workshop, as well as pre- and post-conference tutorials and workshops. In our program design, we attempted to combine the successful approach of ACL07, which had four parallel oral sessions of 25-min full paper presentations, with the HLT model of presenting late-breaking results in parallel sessions of 15-min short paper presentations. We also experimented with an idea adopted from Interspeech, in which authors can choose their desired mode of presentation, oral or poster, based on their assessment of how best to present their work. There is no distinction between posters and oral presentations in terms of quality or in terms of how they appear in the Proceedings. Although it will take more than one year to see this change fully taken up by the membership, we were happy to see some authors choose the poster option from the very outset. Area chairs also used their discretion in indicating which submissions would benefit from which mode of presentation. If the number of submissions continues to grow as it has done in the past few years, poster sessions will be one way to managing this growth without creating a large number of parallel sessions.

This year, the program committee received yet another record-breaking number of submissions, with 470 full and 275 short paper submissions. Full papers were due in mid-January, and the program committee accepted 119 (25%) of these, 95 as oral presentations and 24 as posters. Short papers were due in mid-March, and the committee accepted 64 (23%) of these, 32 for oral presentation and 32 for poster presentation.

First and foremost, we thank all the authors for submitting papers describing their recent work; the sheer number of submissions reflects how active our field is. We are greatly indebted to the 34 area chairs who recruited 720 reviewers, and who managed the reviewing process of both full and short papers in their areas. Reviewers wrote three reviews for each full paper submission, and two reviews for each short paper submission, for a staggering total of just under 2000 reviews! Miraculously, there were only a handful of late reviews. Well done everyone!

As the number of submissions and, consequently the number of area chairs, has risen over the last few years, the ACL program committee has moved away from having a face-to-face meeting of all area chairs. For ACL08: HLT, two of the program co-chairs met for two days at Edinburgh University, using email and teleconferencing to get input from the two program co-chairs not based in Europe, and all of the area chairs. For short paper decision making, three of the four program co-chairs held a teleconference, with input from the fourth co-chair by email as time zone differences permitted.

Another first this year was our decision to award several outstanding paper prizes, rather than trying to identify a single best paper. We did this because we felt that it is typical for conferences as large as this to have several particularly exciting, innovative, and well-crafted papers, and it is extremely difficult to compare quality across areas. We asked area chairs to nominate papers for the various awards and then formed an Outstanding Paper Committee, who wish to remain anonymous, and to whom we owe a great debt of gratitude for their hard work at short notice.

As usual, the main program will run for three days: there will be four parallel sessions of paper presentations. One of these is devoted to the Student Research Workshop, which we would like to thank Ebru Abrisoy, Wolfgang Maier and Keisuke Inoue for organizing. There will also be a poster session on Monday evening, with food and drink to keep everyone going. The demo session, organized by Jimmy Lin, will be held concurrently with the poster session. This year there will be five plenary sessions: two for our very distinguished invited speakers, Susan Dumais and Marc Swerts, one for presentation of the four outstanding papers, one for the presentation by this year's Lifetime Achievement Award winner, and finally one for the ACL business meeting.

Also as usual the conference is flanked by tutorial sessions and workshops. We would like to thank Ani Nenkova, Marilyn Walker and Eugene Agichtein for organizing the tutorials, and Ming Zhou, ChengXiang Zhai and Helen Meng for compiling an excellent program of workshops.

We also thank Kathy McKeown, General Conference Chair, the Local Arrangements Committee headed by Chris Brew, the ACL executive committee, for their help and advice, and last year's co-chairs, Antal van den Bosch and Annie Zaenen, for sharing their experience.

Finally, there were three things that made this all possible. First, we were helped immensely by Jason Eisner, who has compiled an excellent web site on "How to Serve as Program Chair of a Conference" (<http://www.cs.jhu.edu/~jason/advice/how-to-chair-a-conference.html>). This saved us more than once! Second, we employed a recent PhD, James Clarke, to help us get started with START, and to simply deal with the large volume of work that must be processed within the first few days after submissions are received. James kept us sane. Third, there is the invaluable START system for managing paper submission, reviewing, and decision making. We owe Rich Gerber and the START team a million thanks for responding to questions quickly, and even modifying START overnight to provide what we asked for.

Our most sincere thanks go to Joakim Nivre and Noah A. Smith who took all of our labors and put together the wonderful Proceedings you are now reading.

We hope you enjoy the conference,
