

Clinical Trial Report

Section: Results

Outcome Measurement:

- Recurrence-free Survival

Results 1:

- Overall Number of Participants Analyzed: 100
- Unit of Measure: percentage of subjects 98 (92.2 to 99.5)

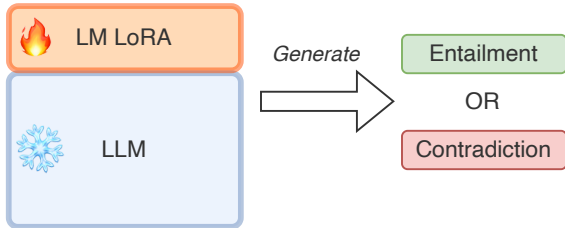

Hypothesis 1 (Entailment)

Only 2 patients in the primary trial did not have Recurrence-free Survival

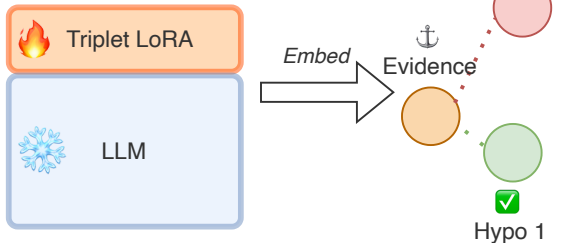

Hypothesis 2 (Contradiction)

Adverse events were a common occurrence among participants in the primary clinical trial

(1) Language Modelling Fine-tuning

(2) Triplet Fine-tuning

(3) Merge LoRA Adapters

$$\theta_{\text{merged}} = \frac{1}{2}(\theta_{\text{LM}} + \theta_{\text{triplet}})$$

(4) Inference
