Introduction

Universal Dependencies (UD) is a framework for cross-linguistically consistent treebank annotation that has so far been applied to over 150 languages. With the goal of enabling both comparative linguistic studies and multilingual natural language processing, the framework aims to capture similarities as well as idiosyncrasies among different languages. Since the first UD workshop in 2017 in Gothenburg, the UD workshops brings together researchers working on UD to reflect on the theory and practice of UD, its use in research and development, and its future goals and challenges. This year’s workshop, 8th Workshop on Universal Dependencies (UDW 2025) is held as a part of SyntaxFest 2025 in Ljubljana, Slovenia, which brought together five related but independent events:

- 18th International Conference on Parsing Technologies (IWPT 2025)
- 8th Universal Dependencies Workshop (UDW 2025)
- 8th International Conference on Dependency Linguistics (DepLing 2025)
- 23rd Workshop on Treebanks and Linguistic Theories (TLT 2025)
- 3rd Workshop on Quantitative Syntax (QUASY 2025)

In addition, a pre-conference workshop organized by the COST Action CA21167 – Universality, Diversity and Idiosyncrasy in Language Technology (UniDive) was held prior to the main event, with dedicated sessions on the 1st UniDive Shared Task on Morphosyntactic Parsing and the 2nd Workshop on Universal Dependencies for Turkic Languages.

SyntaxFest 2025 continues the tradition of SyntaxFest 2019 (Paris, France), SyntaxFest 2021 (Sofia, Bulgaria), and GURT/SyntaxFest 2023 (Washington DC, USA) in bringing together multiple events that share a common interest in using corpora and treebanks for empirically validating syntactic theories, studying syntax from quantitative and theoretical points of view, and training machine learning models for natural language processing. Much of this research is increasingly multilingual and cross-lingual and requires continued systematic analysis from various theoretical, applied, and practical perspectives. By co-locating these workshops under a shared umbrella, SyntaxFest fosters dialogue between overlapping research communities and supports innovation at the intersection of linguistics and language technology. As in previous editions, all five workshops at SyntaxFest 2025 shared a common submission and reviewing process, with a unified timeline, identical submission formats, and a shared program committee. During submission, authors could indicate one or more preferred venues, but the final assignment of papers was determined by the collective program chairs, composed of the individual workshop chairs, based on thematic alignment. All accepted submissions were peer-reviewed by at least three reviewers from the shared program committee.

In total, SyntaxFest 2025 received 94 submissions, of which 73 (78%) were accepted for presentation. The final program included a total of 47 long papers, 21 short papers, and 5 non-archival contributions, distributed across the five workshops: 5 papers were presented at IWPT (2 long, 3 short); 20 at UDW (14 long, 5 short, 1 non-archival); 16 at DepLing (12 long, 2 short, 2 non-archival); 18 at TLT (10 long, 7 short, 1 non-archival); and 14 at QUASY (9 long, 4 short, 1 non-archival).

Our sincere thanks go to everyone who made this event possible. We thank all authors for their submissions and the reviewers for their time and thoughtful feedback, which contributed to a diverse and high-quality program. Special thanks go to the local organizing team at the University of Ljubljana and the Slovene Language Technologies Society for hosting the event, and to the sponsors for their generous support. Finally, we gratefully acknowledge ACL SIGPARSE for endorsing the event and the ACL Anthology for publishing the proceedings.

Keynote

Typologically informed NLP evaluation

Miryam de Lhoneux
KU Leuven, Belgium

Abstract: NLP has a long history of focusing mainly on English. While increasing efforts are being made towards making language technology more multilingual, English remains the language on which NLP technology is developed first, and applied to other languages next, which inevitably leads to degraded performance compared to English. This talk is about reversing this trend and putting multilinguality at the core of NLP, rather than at the periphery. I describe how typology can inform NLP evaluation, using our recently proposed language sampling framework. A strong limitation of the approach is the state of multilingual datasets, which tend to lack coverage, be machine-translated or have questionable quality. UD is an exception, and I emphasize the role it can play in establishing best practices in multilingual NLP evaluation.

Bio: Miryam de Lhoneux is an assistant professor in the department of Computer Science at KU Leuven in Belgium, researching and teaching Natural Language Processing. She heads the LAGoM NLP lab where the focus is on multilingual and interpretable models. Previously, she was a postdoc at the University of Copenhagen in Denmark. She has a PhD from Uppsala University, Sweden, an MSc in Artificial Intelligence from the University of Edinburgh, UK, and a BA and MA in languages and literatures from UCLouvain, Belgium.

Non-Archival Abstract

MultiBLiMP 1.0: A Massively Multilingual Benchmark of Linguistic Minimal Pairs

Jaap Jumelet¹, Leonie Weissweiler² and Arianna Bisazza¹

¹University of Groningen

²University of Texas at Austin

We introduce MultiBLiMP 1.0, a massively multilingual benchmark of linguistic minimal pairs, covering 101 languages, 6 linguistic phenomena and containing more than 125,000 minimal pairs. Our minimal pairs are created using a fully automated pipeline, leveraging the large-scale linguistic resources of Universal Dependencies and UniMorph. MultiBLiMP evaluates abilities of LLMs at an unprecedented multilingual scale, and highlights the shortcomings of the current state-of-the-art in modelling low-resource languages.

Table of Contents

<i>Reference and Modification in Universal Dependencies</i>	
Joakim Nivre and William Croft	1
<i>Annotation of Relative Forms in the Egyptian-UJaen Treebank</i>	
Roberto A. Diaz Hernandez and Daniel Zeman	11
<i>UD Treebanks for Esperanto as a natural language</i>	
Masanori Oya	22
<i>Universal Dependencies for Suansu</i>	
Jessica K. Ivani and Kira Tulchynska	30
<i>Crossing Dialectal Boundaries: Building a Treebank for the Dialect of Lesbos through Knowledge Transfer from Standard Modern Greek</i>	
Stavros Bompolas, Stella Markantonatou, Angela Ralli and Antonios Anastasopoulos	39
<i>UD-English-CHILDES: A Collected Resource of Gold and Silver Universal Dependencies Trees for Child Language Interactions</i>	
Xiulin Yang, Zhuoxuan Ju, Lanni Bu, Zoey Liu and Nathan Schneider	52
<i>A UD Treebank for Bohairic Coptic</i>	
Amir Zeldes, Nina Speransky, Nicholas E. Wagner and Caroline T. Schroeder	59
<i>Negation in Universal Dependencies</i>	
Jamie Yates Findlay and Dag Trygve Truslew Haug	70
<i>TreEn: A Multilingual Treebank Project on Environmental Discourse</i>	
Adriana Silvina Pagano, Patricia Chiril, Elisa Chierchiello and Cristina Bosco	80
<i>Building UD Cairo for Old English in the Classroom</i>	
Lauren Levine, Junghyun Min and Amir Zeldes	97
<i>Universal Dependencies for Sindhi</i>	
John Bauer, Sakiina Shah, Muhammad Shaheer, Mir Afza Ahmed Talpur, Zubair Sanjrani, Sarwat Qureshi, Shafi Pirzada, Christopher D. Manning and Mutee U Rahman	105
<i>Universal Dependencies Treebank for Khoekhoe (KDT)</i>	
Tulchynska Kira, Job Sylvanus and Witzlack-Makarevich Alena	119
<i>Parallel Universal Dependencies Treebanks for Turkic Languages</i>	
Arofat Akhundjanova, Furkan Akkurt, Bermet Chontaeva, Soudabeh Eslami and Cagri Coltekin	129
<i>Towards better annotation practices for symmetrical voice in Universal Dependencies</i>	
Andrew Thomas Dyer and Colleen Alena O'Brien	137
<i>Extending the Enhanced Universal Dependencies – addressing subjects in pro-drop languages</i>	
Magali Sanches Duran, Elvis A. de Souza, Maria das Graças Volpe Nunes, Adriana Silvina Pagano and Thiago A. S. Pardo	143
<i>Annotating Second Language in Universal Dependencies: a Review of Current Practices and Directions for Harmonized Guidelines</i>	
Arianna Masciolini, Aleksandrs Berdicevskis, Maria Irena Szawerna and Elena Volodina . . .	153

<i>Developing a Universal Dependencies Treebank for Alaskan Gwich'in</i>	
Matthew Kirk Andrews and Cagri Coltekin	164
<i>Quid verbumst? Applying a definition of word to Latin in Universal Dependencies</i>	
Flavio Massimiliano Cecchini	174
<i>ShUD: the First Shanghainese Universal Dependency Treebank</i>	
Qizhen Yang	186
