Introduction

Welcome to SemEval-2020!

The Semantic Evaluation (SemEval) series of workshops focuses on the evaluation and comparison of systems that can analyze diverse semantic phenomena in text, with the aims of extending the current state of the art in semantic analysis and creating high quality annotated datasets in a range of increasingly challenging problems in natural language semantics. SemEval provides an exciting forum for researchers to propose challenging research problems in semantics and to build systems/techniques to address such research problems.

SemEval-2020 is the fourteenth workshop in the series of International Workshops on Semantic Evaluation. The first three workshops, SensEval-1 (1998), SensEval-2 (2001), and SensEval-3 (2004), focused on word sense disambiguation, each time expanding in the number of languages offered, the number of tasks, and also the number of teams participating. In 2007, the workshop was renamed to SemEval, and the subsequent SemEval workshops evolved to include semantic analysis tasks beyond word sense disambiguation. In 2012, SemEval became a yearly event. It currently takes place every year, on a two-year cycle. The tasks for SemEval-2020 were proposed in 2019, and next year's tasks have already been selected and are underway.

SemEval-2020 was co-located (virtually) with COLING 2020 - the 28th International Conference on Computational Linguistics - on December 12 and 13, 2020. This year's SemEval included the following 12 tasks, organized into four tracks:

- Lexical semantics
 - Task 1: Unsupervised Lexical Semantic Change Detection
 - Task 2: Predicting Multilingual and Cross-Lingual (Graded) Lexical Entailment
 - Task 3: Graded Word Similarity in Context
- Common Sense Knowledge and Reasoning, Knowledge Extraction
 - Task 4: Commonsense Validation and Explanation
 - Task 5: Modelling Causal Reasoning in Language: Detecting Counterfactuals
 - Task 6: DeftEval: Extracting Definitions from Free Text in Textbooks
- Humour, Emphasis, and Sentiment
 - Task 7: Assessing Humor in Edited News Headlines
 - Task 8: Memotion Analysis
 - Task 9: Sentiment Analysis for Code-Mixed Social Media Text
 - Task 10: Emphasis Selection for Written Text in Visual Media
- Societal Applications of NLP
 - Task 11: Detection of Propaganda Techniques in News Articles
 - Task 12: OffensEval 2: Multilingual Offensive Language Identification in Social Media

This volume contains both task description papers that describe each of the above tasks and system description papers that present the systems that participated in the tasks. A total of 12 task description papers and 288 system description papers are included in this volume.

SemEval-2020 introduced two new awards, one for organizers of a task and one for a team participating in a task. The Best Task award recognizes a task that stands out for making an important intellectual contribution to empirical computational semantics, as demonstrated by a creative, interesting, and scientifically rigorous dataset and evaluation design, and a well-written task overview paper. The Best Paper award recognizes a system description paper (written by a team participating in one of the tasks) that advances our understanding of a problem and available solutions with respect to a task. It needs not be the highest-scoring system in the task, but it must have a strong analysis component in the evaluation, as well as a clear and reproducible description of the problem, algorithms, and methodology.

2020 has been an especially challenging year across the globe, and SemEval-2020 saw its fair share of delays and unexpected changes. We are immensely grateful to the task organizers for their perseverance through many ups, downs, and uncertainties, as well as to the large number of participants whose enthusiastic participation has made SemEval once again a successful event! Thanks also to the task organizers who served as area chairs for their tasks, and to both task organizers and participants who reviewed paper submissions. These proceedings have greatly benefited from their detailed and thoughtful feedback. Thousands of thanks to our assistant organizers Shabnam Behzad and Michael Kranzlein for their extensive, detailed, and dedicated work on the production of these proceedings! We also thank the members of the program committee who reviewed the submitted task proposals and helped us to select this exciting set of tasks, and we thank the COLING 2020 conference organizers for their support. Finally, we most gratefully acknowledge the support of our sponsor: the ACL Special Interest Group on the Lexicon (SIGLEX).
