

Erratum

In the paper “Hierarchical Character-Word Models for Language Identification” in the Proceedings of The Fourth International Workshop on Natural Language Processing for Social Media, with ACL Anthology ID **W16-6212**, the caption to Table 3 reported a mistaken average $F1$ score of 75.6 for the system of Gamallo et al. (2014). The correct value is 72.6. This does not change the interpretation of the results, as the proposed system outperforms both scores.
