

PROCEEDINGS
13TH ANNUAL MEETING
ASSOCIATION FOR COMPUTATIONAL LINGUISTICS
3 : PARSING, SYNTAX, AND SEMANTICS

Timothy C. Diller, Editor
Sperry-Univac
St Paul, Minnesota 55101

PREFACE

The talks presented in Session 3 of the 13th ACL meeting dealt with three facets of the language understanding process: the integration of knowledge sources (Paxton and A. Robinson), syntactic processing (Bates and J. Robinson), and semantic processing (Hendrix, Sondheimer and Perry, and Cercone). The first four talks were oriented toward speech input while the talk by Sondheimer and Perry assumed phrase structure trees as input and the talk by Cercone assumed textual input. The paper from which Bates's talk was drawn was much too extensive for inclusion here and will be published separately. My special thanks to Stan Petrick who agreed to chair this session on very short notice.

--Timothy C. Diller

Program Committee Chairman

TABLE OF CONTENTS

SESSION 3: PARSING, SYNTAX, AND SEMANTICS

Syntactic Processing in the BBN Speech Understanding System *Madeline Bates* 4

System Integration and Control in a Speech Understanding System *William H. Paxton and Ann E. Robinson* 5

A Tuneable Performance Grammar *Jane J. Robinson* 19

Semantic Processing for Speech Understanding *Gary G. Hendrix* 34

SPS: A Formalism for Semantic Interpretation and its Use in Processing Prepositions that Reference Space *Norman K. Sondheimer and Doyt Perry* 49

The Nature and Computational Use of a Meaning Representation for Word Concepts *Nick Cercone* 64
