

DISCUSSION OF PAPER 36

DR. KING asked why the author used an infinite lattice and why she did not consider using more than 2 connectors as does Lambek.

MRS. MASTERMAN replied that she and Lambek have different purposes in mind and that her present scheme answers Dr. Bar-Hillel's objections.

DR. HAYS asked if pattern exists even if some words are lacking.

MRS. MASTERMAN replied that her basic hypothesis is there, even though one can not observe whether or not it is there. That is why she calls the method "rough".
