LINGUISTIC INQUIRY

COMMUNICATION IN ARTIFICIAL INTELLIGENCE

A Series from Pinter Publishers

Series Editors:
Robin P. Fawcett and Erich H. Steiner

This series addresses communication of three types: at the human-computer interface; in computer-computer communication that simulates human interaction; and in the use of computers for machine translation to assist human-human communication.

Pinter Publishers titles are exclusively distributed in North America by St. Martin's Press.

LINGUISTICS ISSUES IN MACHINE TRANSLATION

Edited by Frank van Eynde

This fascinating volume comes out of the research of the Linguistic Specifications Group of the Eurotra Project, an EC-funded project for machine translation between EC languages. It finds that machine translation is not merely a mechanical process but in fact requires a high level of linguistic sophistication. Practical reality has ensured that machine translation will be a major growth area in the 1990s with an increasing necessity for communication on a much wider scale.

EXPRESSIBILITY AND THE PROBLEM OF EFFICIENT TEXT PLANNING

Marie Meteer

Natural language generation is the process of turning a representation of a "situation" into an expression of some relevant portion of that situation, in a natural language text. This book describes in detail the structures of a level of representation called a Text Planner, in the Spokesman generation system, which is an intermediate between the representation of the world and language itself.

USER MODELING IN TEXT GENERATION

Cécile Paris

This book demonstrates the feasibility of incorporating the user's domain knowledge, or *user's expertise*, in a text generation system and addresses the issue of how this factor might affect a text.

1993 • 240 pp. • ISBN 0-86187-809-4 • $79.00

NEW CONCEPTS IN NATURAL LANGUAGE GENERATION

Planning, Realization and Systems

Edited by Helmut Horacek and Michael Zock

This book informs scholars working in the domain of natural language generation (man-machine interface, automatic translation, text generation) about the most recent advances in the field. It presents the newest techniques designed for solving these problems and is an indispensable reference for researchers working in the field.

1993 • 256 pp. • ISBN 1-85567-084-4 • $69.00

TEXT GENERATION AND SYSTEMIC-FUNCTIONAL LINGUISTICS

Experiences from English and Japanese

Christian M.I.M. Matthiessen and John A. Bateman

Systemic linguistics interprets and represents language not as a rule-system for generating structures but as a resource for expressing and making meanings. Using examples from English and Japanese, the authors explain what systemic-functional linguistics is, and how it can be useful in the task of text generation.

Guidelines for Submissions

Manuscripts for **Computational Linguistics** should be submitted on letter-size paper (8.5 by 11 inches, or A4), double-spaced throughout, including footnotes and references. The paper should begin with an informative abstract of approximately 150–250 words. Manuscripts must be written in English. Contact the editor regarding the possibility of electronic submission.

Submissions may be made in any of the following categories:

Papers: This category includes contributions that report significant new research results in computational linguistics or that provide critical reviews of the literature on a particular topic. The length of a paper depends on its content, but it is suggested that manuscripts be limited to forty double-spaced pages. That is the equivalent of thirty journal pages. Each paper is fully refereed, being read by at least two members of the editorial board and usually by an additional expert in the particular subject area. The submission of an article to CL for refereeing means that the author certifies the manuscript is not copyrighted; nor has it been published or submitted for publication to another refereed journal. If any version of the paper has appeared, or will appear, in a non-refereed publication, the details of such publication must be made known to the Editor at the time of submission. The final version of a paper tentatively accepted for publication must be accompanied by a Copyright Transfer Agreement signed by all of the authors or, in the case of a "work for hire," by the employer. This written transfer is necessary under the 1978 U.S. Copyright law.

Letters to the Editor: This category includes statements of opinion on issues relevant to the readership. The Editor and the editorial board will evaluate the appropriateness of these contributions for inclusion.

Five copies of papers or three copies of letters should be sent to:

Julia Hirschberg, CL Editor
AT&T Bell Laboratories
600 Mountain Avenue, 2D-450
Murray Hill, NJ 07974, USA
(+1 908) 582-7496; julia@research.att.com

Squibs and Discussions: This category includes short articles reporting technical results, discussions of results, algorithms, or new computational linguistic data or tools of interest to the journal readership. Submissions should generally not exceed eight double-spaced pages and should be submitted to:

James Pustejovsky, CL Squibs and Discussions Co-Editor
Brandeis University
Computer Science Department
Waltham, MA 02254, USA
(+1 617) 736-2709; jamesp@cs.brandeis.edu

Book Section: Anyone interested in reviewing a book, or in suggesting a book for review, should contact the Book Review Editor; publishers may also submit copies of books for review directly to:

Graeme Hirst, CL Book Review Editor
University of Toronto
Department of Computer Science
Toronto, CANADA M5S 1A4
(+1 416) 978-8747; gh@cs.toronto.edu

The FINITE STRING: Send (a) summaries of research in progress — of particular interest would be perspectives on the activities at a particular institution; (b) announcements of meetings of potential interest to the membership; and (c) personal notes (e.g., honors, moving, changes in status) to The FINITE STRING Editor. Time-sensitive material should be received by the first day of the second month of each quarter to appear in the next issue. Submissions (where possible in electronic form) should be sent to:

Ralph Weischedel, FINITE STRING Editor
BBN Systems & Technologies
10 Moulton Street
Cambridge, MA 02138, USA
(+1 617) 873–3496; weischedel@bbn.com

Founded in 1962, the Association for Computational Linguistics (ACL) is the primary scientific and professional society for natural language processing research and applications. A European chapter was established in 1982. Besides publishing *Computational Linguistics*, the ACL holds international meetings (annually in North America, biennially in Europe) where the state-of-the-art in natural language processing research and development is presented. It also sponsors a series of books on natural language processing through The MIT Press. Recently, special interest groups on the Mathematics of Language, the Lexicon, Parsing, Generation, Computational Phonology, and Multimedia Language Processing have been formed; others are likely to be added.
